

■ Class 9 – Computer Applications (Touchpad Ver 1.0)

Chapter 7 – Effects in Presentation (Full Notes)

A. Very Short Answer Questions (1 mark each)

1. What is a presentation?

A presentation is a group of slides used to show ideas or information in an organized way. It helps a speaker explain points using text, pictures, sound, and video.

2. What is a slide transition?

A slide transition is the special effect that plays when one slide moves to the next during a show. It makes the change between slides look smooth and attractive.

3. What is custom animation?

Custom animation means adding movement or effects to objects like text, pictures, or shapes in a slide. It helps to focus attention on important points.

4. Under which menu is the Movie and Sound option found?

It is found under the Insert menu. This option helps you to insert video or sound clips into your slides.

5. Which feature helps to identify the plotted data series in a chart?

Legend. It shows colors or symbols to explain what each part of the chart represents.

6. What is the default chart type in a presentation?

Column chart. This means when you insert a new chart, it first appears as a column type unless you change it.

7. Which key combination is used to print a presentation?

Ctrl + P. It opens the print dialog box quickly without using menus.

8. Which menu contains the Rehearse Timings option?

Slide Show menu. This option lets you practice your slides and set the exact timing for each.

9. What is the use of Rehearse Timings?

It records how long you take on each slide and saves the timings automatically. It is useful for a self-running or timed presentation.

10. What is multimedia?

Multimedia means using text, pictures, sound, and videos together in a presentation. It makes the presentation more lively and interesting.

11. What is the use of animation?

Animation adds motion or effects to objects in slides. It helps grab attention and make the information more memorable.

12. What is the shortcut key to start a slide show?

F5. Pressing F5 starts the presentation from the first slide instantly.

13. What is the use of the Legend in a chart?

A Legend helps identify data in a chart by matching colors or symbols with data names. It makes the chart easier to understand.

14. Which toolbar has the chart option?

Standard toolbar. It contains commonly used options like New, Save, Print, and Chart.

15. What is a motion path?

A motion path animation moves an object along a specific path such as a line or circle. It shows movement or direction clearly.

16. What is an emphasis effect?

It highlights or draws attention to an object that is already on the slide. Example: making text grow, change color, or spin.

17. What are transition effects?

Transition effects are the movements that happen between slides. They help make the slide show smoother and more professional.

18. Write any two transition effects.

Fade and Wipe. Both are used to make the change between slides look stylish.

19. Write any two animation effects.

Fly In and Bounce. These make text or images enter the slide in a fun way.

20. What is the use of the Preview button?

It allows you to see how your animation or transition looks before presenting. You can change the effect if it doesn't look right.

B. Short Answer Questions (2–3 marks each)

1. What is the difference between Slide Transition and Custom Animation?

Slide Transition Custom Animation

Works between slides. Works within a single slide.

Changes the way slides appear. Adds effects to text or pictures.

Example: Fade, Wipe. Example: Fly In, Spin.

2. What are the four types of animation effects?

There are four main types:

1) Entrance – Object appears.

2) Emphasis – Object highlights.

3) Exit – Object disappears.

4) Motion Path – Object moves on a path.

These help you control how each object behaves on the slide.

3. Steps to apply custom animation to text:

1. Select the text or object.

2. Go to Slide Show → Custom Animation.

3. Choose an effect (like Fly In).

4. Set speed and direction.

5. Click Preview to check.

4. What is the use of multimedia in a presentation?

Multimedia makes slides more appealing and helps the audience understand better. It combines sound, pictures, and text to make learning fun.

5. What are motion path effects?

Motion path effects make an object move along a set route (line, curve, or circle). It's useful to show movement, like a car moving on a road.

6. What are Entrance and Exit effects?

Entrance – How an object appears on a slide.

Exit – How it disappears.

These add movement and make slides dynamic.

7. Advantages of animation:

Keeps audience interested.

Makes slides attractive.

Helps explain key ideas step by step.

8. What is a chart and why do we use it?

A chart shows data in a visual form like bars or pie slices. It helps us understand numbers quickly and clearly.

9. How can you insert a movie or sound clip?

Click Insert → Movie and Sound, choose your file, and set it to play automatically or when clicked. This adds multimedia to your slides.

10. What is the use of Rehearse Timings?

It allows you to practice your presentation. PowerPoint notes how long you spend on each slide and sets timings automatically.

C. Long Answer Questions (4–5 marks each)

1. Explain Slide Transition and Custom Animation with examples.

Slide Transition is the effect between slides (like Fade or Wipe).

Custom Animation is used for text or objects inside a slide (like Fly In or Bounce).

Example: When one slide fades out and the next fades in = Transition. When a title flies in from the side = Animation.

2. Explain the steps to insert and edit a chart.

1. Click Insert → Chart.
2. Enter your data in the sheet.
3. Choose chart type (Bar, Pie, Line, etc.).
4. Add titles or legends.
5. Format colors or layout if needed.

Charts make data easier to compare.

3. Describe the four types of animation effects with examples.

Entrance: Object appears (e.g., Fly In).

Emphasis: Highlights object (e.g., Change Color).

Exit: Object disappears (e.g., Fade Out).

Motion Path: Object moves along a line (e.g., Move Down).

Each effect gives a slide more impact.

4. Explain the steps to apply transition effects.

1. Select the slide.
2. Click Transitions tab.
3. Pick an effect.
4. Choose speed and sound.
5. Click “Apply to All” if you want the same effect everywhere.

5. What are the advantages of using multimedia?

Makes presentation more attractive.

Helps explain ideas visually.

Keeps audience interested.

Combines sound, pictures, and video for better understanding.

6. Steps to rehearse timings:

1. Go to Slide Show → Rehearse Timings.
2. Present each slide.
3. PowerPoint records your time.
4. Click Yes to save timings for automatic slide changes.

7. What are motion path effects and why are they useful?

Motion path moves an object along a path (line or curve).

It's useful for showing direction or flow – for example, moving an arrow or shape from one point to another.

8. How do animations and transitions make presentations better?

They make slides look lively and professional.

They keep the audience focused.

They help explain points step by step.

9. What are charts and why are they important?

Charts show data in pictures, like bar or pie charts.
They make it easy to compare and understand information quickly.

10. What are the four main parts of multimedia?

The four main parts are Text, Graphics, Sound, and Video.
Together they make the presentation more meaningful and fun to watch.

■ Quick Revision Chart

Concept	Meaning (in Simple Words)
Slide Transition	Effect between slides
Custom Animation	Effect inside slide
Legend	Explains chart colors/symbols
Movie and Sound	Insert menu option
Rehearse Timings	Sets slide timing
Multimedia	Text + Picture + Sound + Video
Default Chart	Column chart
Print Shortcut	Ctrl + P
Slide Show	F5 key

Prepared as printable study sheet. All questions included.
